

# Software Asset Management (SAM)

## Compliance Assessment

### Identify your current state of compliance.

Whether you've been approached by a software publisher or simply want to conduct a quick self-audit, our Compliance Assessment is the perfect service for obtaining a one-time evaluation and clean-up of your existing software license situation.

The Compliance Assessment gathers key information for determining IT risk avoidance strategies. After distributing a proper SAM tool to analyze and document your software portfolio, ON-LINE SAM experts help you:

## Managed SAM Services

### Optimize, manage, and maintain your most critical assets.

Have you come to the realization that a dedicated software asset management (SAM) practice provides significant long-term ROI, but also realized that you don't have the resources to fully manage a SAM practice yourself?

ON-LINE's Managed SAM Service ensures the proper implementation of a tailored and optimized SAM practice with a roadmap specifically designed to guide the project's lifecycle:

## SAM Roadmap & Landscape Advisory

### Establish a baseline of your current SAM maturity

Organizations preparing to implement a dedicated SAM practice need to first understand the extent of their existing asset management process. The purpose of the Roadmap & Landscape Advisory Service is to identify the current state of your software portfolio management processes, which provides our SAM Advisors with the necessary information to help you design a roadmap for your future SAM practice.

Leverage ON-LINE's Software Asset Management expertise to help you discover:

- ◆ Undocumented habits and who need to be involved to successfully manage your software portfolio.
- ◆ Your current software lifecycle and license management processes.
- ◆ Potential ROI scenarios by implementing industry leading SAM best practice strategies.

## Predictive Services

***Determine your software support lifecycles to plan for future IT needs.***

Managing the day-to-day business needs is a handful; knowing when a publisher no longer supports the business productivity software you rely on should not add to your growing list of business needs.

By the time you reach the end of mainstream and extended support lifecycles, it may already be too late to properly transition your IT environment from the out-of-date solution to the current license without being affected by significant associated costs.

ON-LINE's Predictive Services enables you to proactively remediate your unsupported environments while planning ahead for upgrades on software that will soon expire.

## SAM Tool Evaluation

***Expert, unbiased advice on the tool best suited to manage your environment.***

Are you looking for the best tool to manage your software portfolio, but unsure of the exact criteria you want your SAM tool to assess? Are you intimidated by the market, and simply want unbiased advice on the most appropriate tool to match your business requirements?

ON-LINE's Agnostic Tool Evaluation service is a comprehensive, unbiased assessment that aligns your desired SAM requirements with the tool best suited to resolve your business needs. We help you identify what asset management criteria matters to you the most, then look at the market to identify the tool that most closely resembles your defined criteria. We can also conduct a proof of concept if you want to see how a specific tool compares to your existing tool.

### About Us

Privately owned since 1987, ON-LINE is a woman owned, WBENC Certified Business offering "Technology Support Products, Services and Solutions". Corporate Headquarters is located at 672 Pleasant Street in Norwood, Massachusetts with additional offices and distribution logistics located in: Arizona, California, Maryland, New Hampshire, New Jersey, New York, North Carolina and Virginia.

## Why Work with us?

### IBM

*We can help you get a clear view of your IBM estate; simplifying your historic IBM purchases and providing visibility of what you now own and use. Our full range of IBM Advisory Services build on this intelligence to provide you and your teams with expert advice on your roadmap decisions, renewal strategy, contract build and negotiation and ongoing management.*

### Microsoft

*We specialize in bridging the disconnect between technology choices, architectural design and Microsoft's licensing rules to identify the smartest way to design, license and deploy your Microsoft investments.*

### ORACLE

*Oracle's IT solutions are powerful, designed to help minimize risk, streamline business processes and reduce the cost and complexity of your IT infrastructure. While Oracle's software is powerful, its licensing policies are complex. ON-LINE will interpret your current and future business needs and constraints and link them to your software needs.*

### SAP

*Very few companies are in full control of their SAP software costs because not many fully understand how SAP's complex licensing rules and metrics work in the real world. ON-LINE's SAP consultants are among the very few that have the knowledge and proven experience to undertake a correct assessment and deep analysis of your systems to optimize your SAP environment, identify cost avoidance opportunities, and help control your future spend, at the same time effectively mitigating major risks associated with an SAP audit.*

### VMware

*Many organizations are already on the journey to some form of cloud computing or virtualization, typically as part of a server consolidation project.*

*ON-LINE's VMware Advisory Services will help you overcome the challenges so you can define and deliver your strategy. Our services can give you full visibility of your current VMware licensing footprint, assess the performance of your VMs and how they can be optimized in order to validate your options as part of a long term strategy.*
