

AXIOM

## The Ultimate In Affordable Modularity Space Age Structural Polymer Design

With unmatched modularity and flexibility, Axiom™ is our most versatile layout solution. The only console of its kind and capability, Axiom's durable *building-block design* allows the user to scale and accessorize in a way that is equal to any premium system on the market today.

The flexibility of the Axiom™ design allows it to meet almost any layout requirements and its unique modularity allows for future changes or upgrades with minimal product add-ons and expense. With its standard modules, the versatility of the Axiom™ allows it to meet the needs of virtually any control room environment. Whether you want to convert from a full-depth to a reduced-depth work surface, closed layout to an open slat wall layout, or even end a configuration on a corner, Axiom™ can accommodate all these types of layouts in just one console!

Axiom's unparalleled versatility is limited only by your control room needs. It is indeed the console of unlimited possibilities.

# Design Features

## Easy Configuration & Expansion

Axiom's unique design makes it easily re-configurable and expandable to meet your changing needs. The console can be changed from full depth to reduced depth, or even a desktop to double high with minimal add-ons. And unlike any other console in its class, the configuration can even end on a corner. It's so easy in fact that you can assemble your own consoles or change the room layout yourself!

## Modular Design

The unique *building block* design allows for limitless layout possibilities, from a fully enclosed to an open slat wall layout – all in one console. With independent upper and lower modules, this flexibility can even allow you to place 24" and 48" upper modules independently on a 72" lower module.

## Structural Strength

An injection molded polymer structure and sheet metal stringers ensure incredible strength and durability to meet all the day-to-day rigors of an intense environment.

## Easy Equipment & Cable Access

Unlimited front and rear access is provided through hinged doors, gas piston-assisted hoods or removable equipment fronts. All processor shelves and equipment fronts are designed with a quick release system to allow for easy removal. Raceways are built into the lateral structure with multiple access ports to allow for effective cable management.

## Contemporary Aesthetics

Created with a contemporary appeal, Axiom's cutting edge cladding design and molded contoured work surfaces are augmented by a rainbow of standard color options and different work surface styles, as well as an unlimited array of custom finishes including optional wood veneer.
