

WIRE ACCESS TRAINING TABLES

Wire management channel with lockable access door is attached to the approach side of the table, restricting unauthorized access to cables. Cables simply "lay in," and are easily accessible. A plenum separates high voltage and low voltage cables, our 4 circuit or single circuit electrical system (see page 54-57 of the June, 2004 Price List) can be field or factory installed.

Affordable power using our single circuit electrical system can provide power to one or as many as 8 power modules, each with duplex receptacles for high and low voltage cables.

Power Modules can be installed in the work surface for quick, easy access.

Power Modules may also be installed securely behind the lockable access door. Power cords for Monitors can be routed through the top, into the wire manager, and plugged into the Power Module.

- Removable low voltage mounting bracket makes it easy to work with.
- Knockout for optional Power Module is provided.
