

VaultLedger™ & Vertices®

Which tape management software is right for you?

B&L Associates, Inc. offers two easy-to-use programs that make the overwhelming task of managing the media in your enterprise quick, accurate and simple. But which one is better for you? The answer depends largely on your business needs and what you are trying to accomplish.

VaultLedger

Unique Features

VaultLedger is perfect for a data center that simply needs a program to physically track tapes and create calendar-based movement lists.

VaultLedger is perfect if you want:

- ▶ Calendar-based movement of tapes
- ▶ A Web-based interface that can be hosted at your site or externally
- ▶ Tape history information
- ▶ Ability to merge shipping or receiving lists
- ▶ Fixed role based security

Features Common to Both

Vertices and VaultLedger share many outstanding features that make managing tapes quick and easy.

Both have:

- ▶ Capabilities to manage media at the Vault and Data Center
- ▶ Multiple tape input options including bar-code scanning, importing from your backup application or importing from your TMS report
- ▶ Easy reconciliation with the Vault and dynamic discrepancy resolution
- ▶ List transmission to Offsite Storage Vendor via FTP
- ▶ A complete audit trail

Vertices

Unique Features

Vertices is more robust. It is designed for the data center that needs to know on which tapes information resides and bases its movement lists on the data contained on the tapes.

Vertices is perfect if you want:

- ▶ Policy-based movement of tapes
- ▶ Built-in automation agents that automatically import tape information from your backup application
- ▶ Management of multiple Vaults and Data Centers
- ▶ To lookup tapes via server, data section, or generation
- ▶ Customized domain and access security
